

Objectives – Opti Crop: Smart Agricultural Production Optimization Engine

1. **Recommend the Best Crop:** Use machine learning to suggest the most suitable crop based on soil nutrients and weather conditions.
2. **Improve Agricultural Productivity:** Help farmers increase crop yield through data-driven farming decisions.
3. **Provide Accurate Predictions:** Analyze soil and climate data to generate reliable crop recommendations.
4. **Support Smart Farming:** Integrate AI and real-time weather information to promote modern agricultural practices.
5. **Develop a User-Friendly System:** Create an easy-to-use web application that allows farmers to quickly enter data and receive recommendations.
